WORKFLOW

1 **Discovery, Goal Setting & Analysis**

In order to create a website & mobile application that achieves the established goals and objectives, it is necessary to understand the needs and considerations of the target audience. Further research will be carried out to get a clear picture of the action required to generate a successful interaction with a website visitor. The site structure and user dialogue are then developed by focusing the appropriate amount of screen space and user interface for the appropriate tasks.

We will review the top competitors/market leaders and take into account the traits and systems which currently work well with the existing audience. Most important is to consider the vision that is driving your business and how that vision is being communicated to your audience.

The goals analysis stage helps to establish specific solutions for each aspect of the design and to determine priorities in design and structure, all of which contribute to the usability and desired action of your online audience.

2 **Website and Mobile App Architecture**

UI/UX design
Development
Testing
Deployment
Maintenance

On the basis of your requirements, we will design the mockup for the website and after your approval on it, we will start the development part.

WORKFLOW (Conti.)

Upon completion of the development phase, final review and quality testing begins. During this stage we review   the site's final implementation on multiple platforms and conditions in an attempt to identify any inconsistencies or errors. Once completed, the site is ready for "live" testing.

Following the site and app launch, best practices recommend the continued monitoring and refinement of a site and its   user experience. Votive Technologies PVT LTD is committed to assisting our clients in an ongoing manner. We would be happy to continue work on additional projects upon the agreement of both parties, with specific objectives determined ahead of time.

PROJECT OVERVIEW

Project Overview :

We will design and develop a Cross-platform Flutter-based Mobile Application on both platforms (Android and iOS) in both languages (English and Arabic). We will provide the following features:

User Features:

• User login via phone number with SMS one-time passcode (OTP) authentication.

• Browse a list of available custom items for delivery.

• Access real-time location and find nearest available driver (if enabled).

• View item details, price, and estimated delivery cost (distance multiplied by driver's price per km).

• Accept or reject delivery based on cost and distance.

• Track driver location (upon order acceptance).

• Submit review for driver after delivery.

• Cancel order if it's not delivered within a specific timeframe (e.g., 1 hour).

• Access order history with details.

PROJECT OVERVIEW

Driver Features:

• Driver login via phone number with SMS OTP authentication.

• Submit initial documents for verification: ID, vehicle plate number with picture, car/truck picture, driver photo.

• Define items for delivery, including unit name, price, and price per km distance (if delivery is not free).

• Add new items for delivery (subject to admin approval).

• Set availability status (on/off) based on driver's schedule.

• Access real-time location (GPS required when available).

• Receive notifications for assigned orders.

• Access user location and phone number upon order acceptance.

• Contact user via phone call or navigate to user location through Google Maps.

• Mark order as complete and leave a review for the user.

• Cancel order (if necessary).

• Update item details (price, add/remove items) subject to admin approval.

PROJECT OVERVIEW

Admin Features:

•Access control panel on Firebase for managing users, drivers, orders, items, driver documents, and driver availability status.

Deliverables

• Fully functional mobile application for iOS and Android platforms.

• User-friendly and intuitive interface design for both users and drivers.

• Backend development for managing user authentication, data storage, and order processing.

• Firebase integration for user authentication and data management.

• SMS integration for OTP authentication.

Project Flow

Project Flow:

-We would approach your project by starting with a design complete before starting the actual development phase.

-We will do the Testing and QA from our end on a regular basis.

-Once the development is complete, we will deploy the website on your live server.

-After you are 100% satisfied with the work, we will close the project.

-We will provide Training and documentation for the end-users.

PAYMENT SCHEDULE

Total cost: 3500$

Timeframe: 3 Months

After project completion, we will provide 1 year free of cost Maintenance.

PAYMENT SCHEDULE

Milestone	Days	Amount(USD)
1st Installment		800$
2nd Installment on Design Approval		800$
3rd Installment on Halfway		800$
4th Installment on Final project delivery		1100$

EXCEPTIONS

The following items are not included in the price given in this estimate unless specifically noted in the 'Deliverables' section of this proposal:

- Written content
- Flash or animation of any type
- Illustration or photo retouching
- Audio/Video editing or authoring
- Product photography
- Paid Plugging

ADDITIONAL SERVICES

We will provide you additional services:

- Project Planning and Sprint Development.
- Unlimited revisions in design.
- Testing and QA.
- Error free & clean codes.
- Fully SEO Friendly.
- Easy to use and navigate, you will easily add/edit the content.
- Free of cost Deployment.
- Support after deployment.
- Post Deployment support Free of cost.
- Satisfaction guarantees.

ASSUMPTIONS

The following items are what our team will assume to be true at the beginning of any project. If any of the following information is NOT true, or unclear please don't hesitate to discuss it with us.

The client clearly understands our process as outlined in this proposal and agrees to follow these steps.

If the client is providing their own content, they agree to deliver it to our team after editing it internally and as complete as possible.

Prior to sending it to Votive Technologies PVT LTD, the client will acquire the copyright or consent to use any photograph, illustration, animation, font, written document, audio or any other item which may constitute someone else's intellectual property.

The client will elect to have one member of their team act as the point of contact with Votive Technologies PVT LTD. In the case where there are several decision makers on the client's team this point of contact will compile all of their input and present it to Votive Technologies PVT LTD.

Any change, adjustment or modification of any kind will be provided to Votive Technologies PVT LTD in writing either in a MS Word Document or via email.

Votive Technologies PVT LTD. will have access to all necessary servers.

Votive Technologies PVT LTD has made every effort to clearly present all included design and development services included in this price. If there is a feature, technology, functionality or service that does not appear in this proposal… it is NOT included in the estimate that we've provided. Please let us know prior to signing this document and it will be adjusted accordingly.

ENGAGEMENT MODEL

1

FIXED PRICE

When your project specifications, scope, deliverables and acceptance criteria are clearly defined then we can offer you a not-to exceed fixed time & fixed price engagement model.

2

TIME & MATERIAL MODEL

Most suitable for projects which have dynamic business requirements & complicated business operations. scope is likely to change during development/scope is not well defined & evolve during development - due to which accurate cost estimation is not possible, so we suggest this model.

3

ONSITE / OFFSHORE STAFFING - ON DEMAND

Suitable for everyone - Small, Medium & Large businesses., if you have IT need & requirement to hire offshore/onsite dedicated developer, you can acquire specialized talent on term basis & leverage our professional services - ON DEMAND

4

OFFSHORE DEVELOPMENT CENTER

Which organization would not like to have a dedicated team? A team that understands their business & technology, which can be quickly changed in size without the administrative overhead of resourcing, managing & enabling the team with the infrastructure required. And, of course, delivers high-quality cost-effective solutions.

The lab/center is staffed with long term dedicated staff; equipped with required infrastructure & connectivity; tailored process & practises are implemented; and collaboration & communication tools deployed. Key service levels for the lab/center are defined & monitored jointly with the client.

PROJECT LIFECYCLE

1.

INITIATION
Your challenge, NDA, initial interviews (if required) and case research

2.

PROPOSAL
Precise analysis of your business case resulted in well-structured and clear proposal, resenting you the vision of the solution that suits your business goals

3.

WIREFRAMES & UI/UX DESIGN
After Detailed analysis, developing the project wireframes, UI/UX designs and architecture definition

4.

DEVELOPMENT, TESTING & DEPLOYMENT
Pre-Alfa, Alfa, Beta and Production versions coding, testing and deployment. May require several iterations.

5.

SUPPORT & MAINTENANCE
Keeping your software up and running, its further development in response to the market challenges and customers' requests/needs.
